Some title

And a small subtitle

Contents

Part I. This is part one

1   heading one in /main.md

Edit made on new os.
paragraph in /main.md
note the things in **parts** must be *directories* which contain a main.md. That main.md file may also have a **parts** section for including further files, etc.

Part II. This is part two

2   To do

- Closely match the appearance of my latex documents from a year ago

    - same border spacing
    - same structure, e.g. have an abstract/terminology/progress sections, bibliography/appendix etc
    - make top level headings as 'parts', e.g. part 1, part 2,

well let's consider this algorithm

```
def mainko(bozo):
    return "hungry"
```

as well as this

```
int mainko(int bozo){
    return ERROR_UNDEF;
}
```

3   heading level 2 in the .md

aaa

3.1   heading level 3 in the .md

bbb

4   Heading level 1 (should become 2) in content/a_outerfolder/main.md

Content below that heading in the markdown file

5   Heading level 1 (should become 2) in content/b_outerfolder/main.md

Content below that heading in the markdown file. A nested list test follows.

1. This is one element
2. Another

    1. And a nested element
        - with a nested dot
        - another
    2. More element

3. Outer end of list

Note that there are two more subfolders here, however they are not referenced in this markdown file, and hence are not integrated into the final document.

another end line... helps?

7   hellobd

ffbd

Part III. another top level heading

here's a copy-pasted thing of the parts - does it work?
